SUBJECT:

Soft Top

MODELS:

STAG

It is important that the retaining hooks on the soft top hood sticks are fully engaged during lowering of the hood assembly (figure 1 and figure 2).

To ensure that full engagement is being achieved, a check is required during pre-delivery and the 1,000 inspection and, wherever necessary, the position of the hooks should be adjusted (arrowed figure 2) by means of the two set screws (not shown) which secure the hook to the hood frame.

There are two hooks, one on either side of the hood frame.
